

Problem Statement

The goal is to make a system that can be used to conduct examinations. The scope of this assessment is to create only a relational diagram which would meet the requirements.

- There are two types of users in our system.
 1. Teacher - User with ability to create question paper and see the submissions of students.
 2. Student - User with the ability to submit response to the question paper
- There are 3 types of questions which can be in a question paper
 1. Multiple Choice Question with only one correct answer
 2. Multiple choice questions with multiple correct answer
 3. Boolean type questions with only True or False as answer.

Expectations:

- Teacher should be able to create a question paper with multiple types of questions (stated above) and N number of questions.
- Teachers should be able to send a test link to a student which will open up a question paper.
- Students should be able to complete the question paper and submit the response.
- Teachers should be able to see the full response of a submission done by a student.
